These types of open-ended questions illustrate the complexity of feeding practices and eating behaviors.

How is the food being prepared? Fried, baked, or boiled?

Other words, what are the portion sizes like?

Where are the foods being eaten? Are they eaten in the car, at a family meal, in front of the TV? How much food is being eaten?

For example...

Consumption of foods?

What questions remain unanswered? What else is included when you consider the nutrition behaviors that influence or impact the

When conducting an assessment, you focus on asking what foods are typically eaten by the participant and then stop. In doing so,

For example, Imagine this scenario...

When determining the completeness of a Dietary Assessment, the goal is to get a full picture – not a partial picture.
Select the best answer.

All of the following points in the picture demonstrate good measurement methods EXCEPT:

Review the photo for accuracy in taking a height measurement. Then answer this question:

Let's continue to test your skills... This question is a quick check on your ability to accurately take a height measurement.

Surface:

heels, buttocks, and shoulder blades. For proper measurement of height, it is very important for all your areas to touch the measuring device. Incorrect answer:

A. No, not quite – better 60 off back and reviewed. The correct answer is A. Pay attention to all your contact points – head, hands, and shoulder.
